Certificate of constancy of performance

0432-CPR-00099-01

Version 06

In compliance with Regulation (EU) No 305/2011 of the European Parliament and of the Council of 9 March 2011 (the Construction products Regulation or CPR), this certificate applies to the construction product

ECO emergency exit devices

Emergency exit devices operated by a lever handle for single and double leaf doors in escape routes as detailed and classified in annex 2 and with the intended use as detailed in annex 3,

placed on the market under the name or trade mark of

ECO Schulte GmbH & Co. KG

Iserlohner Landstraße 89

58706 Menden

Deutschland

and produced in the manufacturing plant(s)

see annex 1

This certificate attests that all provisions concerning the assessment and verification of constancy of performance described in annex ZA of the standard(s)

EN 179:2008

under **system 1** for the performance set out in this certificate are applied and that the factory production control conducted by the manufacturer is assessed to ensure the

constancy of performance of the construction product.

This certificate was first issued on 21.05.2014 and will remain valid until 10.05.2024 as long as neither the harmonised standard, the construction product, the AVCP methods nor the manufacturing conditions in the plant are modified significantly, unless suspended or withdrawn by the notified product certification body.

Dortmund, 11.05.2022

By order

RBA T. Meinks

Deputy Head of Certification Body Department
22.30.2

This Certificate consists of 1 page and 3 annexes.

This Certificate replaces the Certificate no. 0432-CPR-00099-01 dated 04.01.2021,
Version 05.

The original of this document was issued in German language.

In case of doubt only the German version is valid.

Legend

VS-Type A	Lock for single and double leaf doors	Classification z=A
VS-Type B	Lock for outside opening single leaf doors	Classification z=B
VS-Type C	Lock for inactive leaves in a double leaf door	Classification z=C
VS-Type D	Lock for inside opening single leaf doors	Classification z=D

- *) With Type C locks – locks intended exclusively for the inactive leaf of double-leaf doors – only 20,000 test cycles were conducted as proof of Class 7 lasting function ability (2nd mark) in accordance with EN 179.
- a) With lock cylinders (PZ/RZ) as standard or half cylinder locks, the escape door function of the lock is only guaranteed when the key is removed.
- b) All types of lock cylinders have no influence on the proper function of the escape door. Lock cylinders with a spring-assisted or stiff driver can influence the self-locking function of the locks. The manufacturer should check the compatibility.
- cmb: Shows each matching latch for the other door leaf. Only with latches for double-leaf doors.
- drk: Shows the handles with which the latches can be fitted.
- Function I: One-piece spindle hub, constantly active escape door function.
It is always possible to use the handle on the inside to open the door. The door can only be opened from the outside using the key in the track cylinder core.
- Function III: Split spindle hub, constantly active escape door function from the inside.
It is always possible to use the handle on the inside to open the door. The handle on the outside is either permanently engaged or permanently disengaged using the key. The latch can only be operated from the outside by the key. Once the handle on the inside has been used to open the door, the door can also be opened from the outside until it is relocked manually.
- Function IIIId: Split spindle hub, constantly active escape door function from the inside.
It is always possible to use the handle on the inside to open the door. The handle on the outside is either permanently engaged electrically or released for operation. The latch can always be operated by the key.
- Function IV: Split spindle hub, constantly active escape door function from the inside.
It is always possible to use the handle on the inside to open the door. The handle on the outside is either permanently engaged or permanently disengaged using the key. The latch can only be operated from the outside by the key. Once the handle on the inside has been used to open the door, it cannot be opened by the handle on the outside either.
- Function V: Split spindle hub, constantly active escape door function from the inside.
It is always possible to use the handle on the inside to open the door. In the default position, the fitting on the outside is disengaged. It can only be engaged by turning the key to a certain position. Once the key has been removed, the outside fitting is disengaged once again.
- Remark: In agreement with the terms of the German building regulation legislation, a lock of VS-type B according to DIN EN 179 (lock for single leaf doors) can be used also in the active leaf of a double leaf door, if:
- the inactive leaf catch is secured against maloperation, and
 - the passage width of the active leaf is sufficient as escape route width.

ECO Emergency exit devices Alternative- & special – equipment

1. Outside door handles

Door handles according to DIN 18273 with valid certificate of conformity can be used as outside door handle.

For the locks with handle combination D1 – D15 the following electronic lever handles can be used:

- Special handles SALTO XS4, model Ei4xx... and Ei6xx... according to P 120003012, as well as special handles „series XS4 MINI“, model Ei150 and “series XS4 one“, model Ei7xx... according to P-120004926 of Fa. SALTO Systems S.L. The handles must wear coding DO 20.52.
- Mechatronical handles of the c-lever pro model series in accordance with general building authority test certificate No. P 120004990 of Fa. dormakaba Schweiz AG. The handles must wear coding DO 6.21.
- Mechatronical handles, models of the series „DOM ENiQ Guard“, „DOM ELS Guard“ and „DOM TapKey Guard“ according to general building authority approval No. Z-6.100-2554 as well as models of the series „DOM Guardian“ according to general building authority test certificate No. P-120003866.02-1 of the company DOM Sicherheitstechnik GmbH & Co. KG. The handles must wear coding DO 20.56.
- Mechatronical door handles "Smart Handle 3062...", "Smart Handle AX..." and "Smart Handle AX Plus..." in accordance with general building authority approval No. Z-6.100-2594 of Fa. Simons Voss Technologies GmbH. The handles must wear coding DO 20.57.
- Mechatronical handles "CES OMEGA FLEX ILS", " CES OMEGA FLEX SMARTSCHILD SIS" and " CES OMEGA ILS-I" in accordance with general building authority approval No. Z-6.100-2586 of Fa. C.Ed. Schulte GmbH Zylinderschlossfabrik. The handles must wear coding DO 5.6.

2. Escape route security

In principle, there are no objections to securing doors in escape routes with the GFS-door guard "GFS-Tag-Alarm" with regard to the function of the locking devices. The safety device is not to be considered part of the emergency exit devices according to EN 179:2008. In case of doubt, the suitability must be proven separately.
